순간에 피로회복
It Relieves Fatigue at One Try

감탕욕을 하면 내장장기들의 혈액순환과 영양이 좋아지며 염증산물이 빨리 흡수되고 몸에 해로운 여러가지 중독성 물질과 대사산물 등이 땀을 통하여 배설됩니다. 또한 일부 내분비선들 특히 콩팥울선의 기능이 좋아집니다.

Mud bath promotes blood circulation of internal organs and helps nourish them, absorb the inflammatory products quickly and sweat out various toxic substances and metabolites which are harmful to health. It also boosts the functions of some endocrine glands, especially the suprarenal gland.

Mud therapy is an element of national cultural heritage and traditional Eastern remedy that the Koreans created and practised for thousands of years.
